Project Upload Instructions

You will need to create a compressed (.zip) file in order to be able to upload your report and all of the MATLAB files together. The instructions are slightly different for Windows or Mac, but both easy. If you are using an operating system other than these, I will assume you know how to create a .zip file already.

For Windows:

Make sure all of your files needed for your program are in one folder. ALL OF THE FILES! If something is missing and the program doesn't run, you will lose at least half your marks for the project! Also make sure your project report is in this file as well.
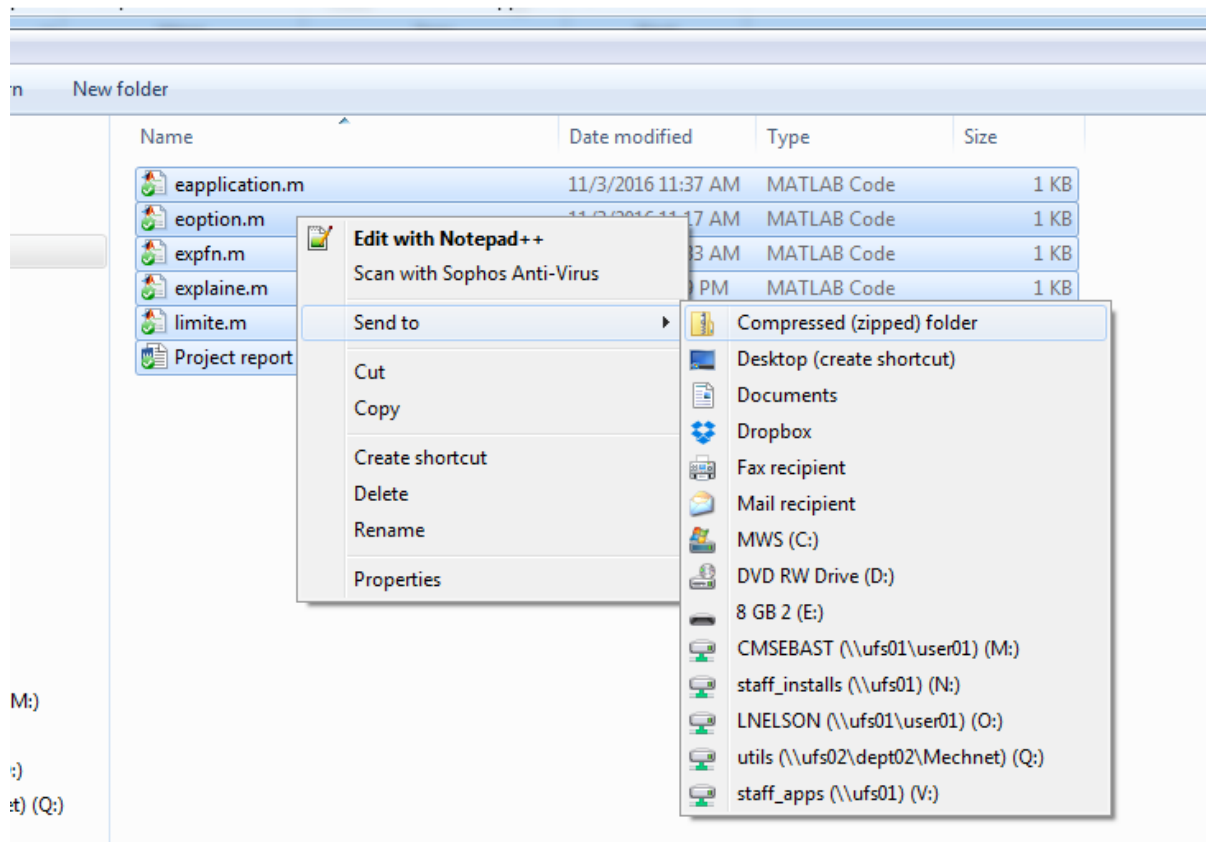

Use shift + left click to select all of the files.

Right click to bring up the options menu shown below.

Send to -> Compressed (zipped) folder.

That's it! **Be sure to name your folder with your Student I.D.**
You can now upload the zipped folder to the Project Assignment in VITAL.

For Mac:

Make sure all of your files needed for your program are in one folder. ALL OF THE FILES! If something is missing and the program doesn't run, you will lose at least half your marks for the project! Also make sure your project report is in this file as well.

Use shift + left click to select all of the files.

Right click to bring up the options menu shown below.

Select Compress XX Items (where XX is the number of files selected).

That's it! **Be sure to name your folder with your Student I.D.**
You can now upload the zipped folder to the Project Assignment in VITAL.
